

LCG HELPS DILIMA DEVELOP DIGITAL DASHBOARD FOR EXECUTIVES

Dilima is a highly-respected Washington DC region provider of computer networking services for small and medium sized businesses. When Dilima needed help to develop a new Microsoft Share-Point-based executive dashboard on a tight schedule, LCG became a trusted partner to get the job done.

REAL-TIME DATA IS DISPLAYED

Dilima had been working with their client to develop an executive digital dashboard to provide key data to top-level executives regarding the status of a variety of maintenance type indicators (work orders, preventative maintenance tasks, etc.). Actual real-time data and status information was to be displayed by visual objects integrated into the 9-page SharePoint site. Dilima had requested LCG assistance specifically to create queries for user objects to be displayed.

Much of the framework had already been completed by Dilima, including a prototype display object. Data

used as input for the display screens was being maintained within a MS SQL Server 2005 database that included about 70 tables of which 15 - 20 were accessed for the needed data.

LCG DELIVERS

With a tight project deadline looming, LCG was able to quickly assemble a team of .NET Developers that began work on the project within days. The LCG team was successful in helping Dilima meet a tight deadline of having all queries functioning properly so that a fully functioning site could be delivered to their client on time.
